

Prince Busa

Surat, Gujarat, india (+91)9313730785

 github.com/princebusa  linkedin.com/in/prince-busa  princebusa.com  busaprinced13@gmail.com

Full-stack software engineer with ~2 years of experience building and scaling AI tools, trading engines, and SaaS apps across backend architecture, infrastructure, and implementation-focused frontends on distributed systems.

WORK EXPERIENCE

Full Stack Engineer | Internship
Dechub

Jan 2025 – Apr 2025
Remote - Bengaluru, india

- Built and integrated frontend features for Tanishq, developing responsive UIs with React, Tailwind CSS, and backend API integrations.
- Contributed to the development of an end-to-end CRM, working closely with the founding team across frontend, backend, and database workflows.
- Assisted in production deployments and infrastructure setup using Docker and CI/CD, gaining hands-on experience shipping applications to live environments.

Full Stack Engineer | Full-Time
Dechub

May 2025 – Present
Remote - Bengaluru, india

- Owned end-to-end development and production delivery of a CRM, from system design and database implementation to deployment and maintenance.
- Designed and executed a production database migration for a high-traffic application, minimizing downtime and ensuring uninterrupted service for active users.
- Built and maintained Docker-based deployment workflows and CI/CD pipelines, improving the reliability and efficiency of application releases.

PROJECTS

Tradex - Stock Trading Platform |  [Website](#)  [Github](#)

- Built a low-latency in-memory order book and price-time priority matching engine, processing buy/sell orders through dedicated workers for scalable trade execution.
- Implemented Redis-based order queuing and WebSocket market-data broadcasting to support asynchronous order processing and real-time updates to connected clients.

Technologies / Tools Used: React, Node.js, Tailwind CSS, PostgreSQL, Redis, WebSocket, Docker

Sloth - Google Drive AI Agent |  [Website](#)  [Github](#)

- Built a Google Drive RAG agent that automatically ingests documents, generates embeddings, and stores them in Qdrant for semantic retrieval and context-aware responses.
- Designed an asynchronous queue-driven ingestion worker to process newly connected Drive files, enabling users to search and chat with their documents using natural language.

Technologies / Tools Used: Next.js, PostgreSQL, Redis, Langchain, Tailwind CSS, Node.js, Docker

Brick - AI Website builder |  [Website](#)  [Github](#)

- Built a Lovable-style AI web app builder that uses an AI coding agent to generate and modify applications with an interactive live preview.
- Integrated E2B sandboxes for isolated code execution, enabling generated applications to run securely while streaming live development output to users.

SKILLS

Programming Languages : Typescript, Javascript

Frameworks & Libraries : React, Next.js, Node.js, Express, Tailwind CSS, Shadcn/ui, Bun.js

System Design & Infra : Microservices, Distributed Systems, Event-Driven Systems, REST APIs, WebSockets, Redis

Databases : MySQL, PostgreSQL, Redis, MongoDB, Prisma

DevOps & Cloud : Docker, Kubernetes, AWS (EC2, S3), DigitalOcean, CI/CD, Cloud Deployment
